

What is a Scientist?

'somebody who knows things'

Can boys AND girls can be scientists?

Unanimous 'YEEES'

Scientists use their senses to notice.

Senses: See, touch, hear, taste, smell.

Then, after noticing change scientists "test" their ideas.

Our Solar System

Some of us held a picture of a planet on a line in relation to how far away from the sun that planet is. Bianca was holding a picture of Neptune very far away!

Brian

Brian showed us a dance of the moon revolving around the Earth as the Earth slowly moves around the Sun.

Star Dome

29 October

Brian from Sci World brought the Star Dome – a giant inflatable tent which we all sat in then looked up at the constellations projected on the walls of the Star Dome.

Inside the Stardome the stars were projected onto the walls. Brian pointed out the constellations and told us what they mean to different cultures. We noticed some stars are different colours. We were surprised to find out the blue stars are hotter than the yellow and red stars.

We incorporated Star Dome into our curriculum because we have had several children show an interest in SPACE. This STEM (science technology Engineering and math) also addresses Outcome 4: Children are confident and involved learners .
